PROJECT

EMBEZZLEMENT IN ONLINE TRANSACTION

The main objective of this project is to find the happened online transaction is fraud transaction or non-fraud transaction. In this Project we used Decision Tree, Random Forest and K Nearest Neighbour Algorithms to find the transaction is valid transaction or fraud transaction. Firstly we train the model by giving the fraud transaction features and valid transaction features. Based on these features the model will decide whether the transaction is valid or not by using the algorithms.

EXTRA-CURRICULAR ACTIVITIES

- Participated in **Evolve-X a mobile or web application development** contest organized by IEEE computer society chapter Hyderabad section.
- Selected as a **student mentee** IEEE Student members for IHMPS 2021 and completed my 3 months Internship program by completing the assigned tasks by the mentor in Cyber Security domain. And also submitted my whole Internship report to IEEE Hyderabad Mentorship Committee.
